SUMMARY

Computer Science Engineering (AI & ML) student with an 8.57/10 SGPA and hands-on experience in Python, Machine Learning, Data Science, Computer Vision, and AI application development. Experienced in building end-to-end AI systems using Scikit-Learn, OpenCV, Pandas, NumPy, FastAPI, and Streamlit, with practical experience in data preprocessing, model development, evaluation, API integration, and deployment. Strong foundation in Data Structures and Algorithms, OOP, DBMS, and software engineering. Seeking an AI/ML Internship to apply machine learning and data-driven problem-solving skills to real-world applications.

EDUCATION

Theem College of Engineering, Palghar **2023 – 2027**
B.E. in Computer Science & Engineering (AI & ML) *SGPA: 8.57/10*

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C, SQL, JavaScript
Machine Learning: Machine Learning, Scikit-Learn, Supervised Learning, Model Evaluation, Data Preprocessing, Feature Engineering, Reinforcement Learning
Data Science: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis, Data Analysis, Data Visualization
Computer Vision: OpenCV, Face Recognition, Image Processing
AI Development: FastAPI, Flask, Streamlit, AST Parsing, AI Agents
Web Development: React.js, TypeScript, Node.js, Express.js, REST APIs, JWT
Databases: MongoDB, PostgreSQL, SQLite, SQL
Tools: Git, GitHub, Jupyter Notebook, VS Code, Docker
Core Concepts: Data Structures and Algorithms, OOP, DBMS, Software Engineering, Operating Systems, Computer Networks

EXPERIENCE

Deloitte – Data Analytics Job Simulation (Forage) **Feb 2026**
Remote Virtual Experience

- Completed practical, real-world tasks in **data analysis and forensic technology** as part of Deloitte's virtual internship program.
- Applied structured analytical techniques to interpret datasets and identify patterns relevant to forensic investigation.
- Delivered findings in a clear, business-ready format aligned with Deloitte's analytical standards.

JPMorgan Chase & Co. – Software Engineering Job Simulation (Forage) **Feb 2026**
Remote Virtual Experience

- Completed hands-on tasks involving project setup, **Kafka integration, H2 database integration, and REST API** development and integration.
- Built and tested backend components simulating real JPMorgan engineering workflows.
- Strengthened understanding of data pipeline and system integration applicable to analytics infrastructure.

Tata – Forage, Data Visualization Virtual Experience Program **Nov 2025**
Remote Virtual Experience

- Analyzed business datasets to identify trends, KPIs, patterns, and actionable insights using data analysis and visualization techniques.
- Prepared structured visual analysis and communicated data-driven findings to support business-oriented decision making.

YuvaIntern – Virtual Data Science with Python Trainee **2026**
Virtual Internship

- Completed a virtual internship focused on **Data Science with Python**, gaining practical exposure to data analysis and Python-based data science workflows.
- Applied Python programming and data science concepts to practical learning tasks and problem-solving activities.
- Demonstrated consistent learning, professionalism, and commitment throughout the internship program.

PROJECTS

Syntax – AI-Powered DSA Code Analysis Platform **GitHub | 2026**

- Developed an AI-powered platform for analyzing DSA code, identifying time and space complexity, generating optimization suggestions, and providing algorithm visualizations.
- Built a Python FastAPI AI engine using AST parsing and integrated it with a React/TypeScript frontend and Node.js/Express backend.
- Implemented JWT authentication, MongoDB persistence, analysis history, dashboard insights, and automated PDF report generation.

Beyonder – AI-Powered Cybersecurity Platform **GitHub | 2026**

- Built an AI-powered cybersecurity platform for threat monitoring, security analytics, intelligent file monitoring, backup management, and recovery.
- Developed a React/Vite frontend and FastAPI backend with threat analysis, filesystem monitoring, incremental backups, and security event processing.
- Implemented predictive security analytics, threat scoring, pattern analysis, AI-assisted insights, and SHA-256 blockchain-based audit logging.

MetaMind – Self-Learning AI System **2026**

- Developed a self-learning AI agent using reinforcement learning concepts for adaptive decision-making and dynamic strategy selection.
- Implemented reward-based feedback loops and iterative learning mechanisms to improve decisions based on previous outcomes.

Face Recognition Attendance System **2025**

- Built a computer vision-based attendance system using Python and OpenCV for face detection, recognition, image preprocessing, and automated attendance tracking.
- Developed a Streamlit dashboard for real-time monitoring and attendance record management.

POLARLOGIX – Polar Expedition Logistics & Asset Management **GitHub | 2026**

- Developed an intelligent logistics platform for expedition planning, cargo tracking, personnel management, route-risk analysis, cold-chain forecasting, and emergency response.
- Built a FastAPI backend with PostgreSQL/SQLite, JWT authentication, offline synchronization, GeoJSON mapping, route-risk scoring, and decision-support workflows.
- Implemented IndexedDB-based offline queuing, Docker deployment, automated testing, cargo validation, and field-data synchronization.

AI Vulnerability Scanner **2025**

- Built an AI-assisted security scanning tool to identify web vulnerabilities, analyze security risks, and generate structured reports.
- Implemented automated scanning workflows with risk analysis and remediation suggestions.

Startup Funding DApp – Blockchain-Based Funding Platform **GitHub | 2026**

- Developed a decentralized application for managing startup funding using **Ethereum Smart Contracts** and blockchain technology.
- Implemented startup funding applications, owner-based approval workflows, and secure fund disbursement directly to approved startup wallets.
- Integrated **Solidity, Ethereum, MetaMask, ethers.js, and Express.js** for smart contract interaction, wallet connectivity, and transaction management.

Deskline – Customer Support Ticketing CRM **GitHub | 2026**

- Developed a full-stack customer support ticketing system for managing requests across multiple support channels.
- Implemented ticket creation, search and filtering, status management, and internal notes for streamlined support workflows.
- Built the application with **React.js, Node.js, Express.js, SQLite, and REST APIs**.

TN Elections 2026 Analytics – Data Science Dashboard **2026**

- Performed exploratory data analysis and constituency-level analysis to identify patterns, trends, and data-driven insights.
- Built an interactive Streamlit dashboard with data visualizations and K-Means clustering for analytical exploration.

CERTIFICATIONS

- **AI/ML for Geodata Analytics** – ISRO / IIRS, Dehradun 2026
- **AWS Academy Graduate** – Cloud Foundations – AWS Academy 2026
- **Advanced Software Engineering Job Simulation** – Walmart Global Tech / Forage 2025
- **Data Visualisation: Empowering Business with Effective Insights** – Tata / Forage 2025
- **Data Science for Everyone** – Reliance Foundation / Skill India 2025
- **Green Skills & Artificial Intelligence** – Edunet Foundation / AICTE / Shell 2025
- **SOAR – AI for Educators** – Microsoft / NCVET / Skill India 2025
- **Python for Absolute Beginners** – EC-Council 2024

ACHIEVEMENTS

- **2nd Runner-Up** – Smart India Hackathon (SIH) Selection Hackathon, 2024–2025.
- Recognized for innovation, problem-solving, technical development, and rapid prototyping.

LEADERSHIP & VOLUNTEERING

- **NSS Volunteer:** Participated in community initiatives including beach cleanups and social activities.
- Coordinated technical and social activities with an emphasis on teamwork, communication, and execution.
